Release 1 Review

High-Level Tasks Completed

- Able to get Yelp API calls working
- We got MongoDB working locally
- Made a simple algorithm that searches through the restaurants and return a selection based on user preference
- Website has been stylized to fit the theme of the application
- Got user login working with Firebase

What Worked for the Team

- Facebook Messenger
- Trello(Scrum Board)
- Peer programming
- Talking to TA
- Communication between frontend and backend

What Didn't Work for the Team

- Did not meet up often as a group to do project jams
- Did not spend enough time on the application
- Group came later to scrum meetings

Functions Implemented

- Got Yelp API calls working
- Passed data between frontend and backend
- Frontend passed data to other pages using localStorage
- Selected restaurants based off of our algorithm

Still In Progress

- Connecting user login functionality to front end

Backlog for the Future…

- Store/Retrieve User Favorites from database
- Implement a better algorithm for choosing restaurants
- Have a profile page for users
